Specification of Competency Standards for the Automotive Industry Unit of Competency

Functional Area - Vehicle Servicing

servicing. Practitioners should be able to know about the structure and basic operation of vehicles and components. Level 1 Credit 1 (For Reference Only) Competency Performance Requirements 1. Knowledge (The structure and functions of vehicles and components) • Know about the formation of vehicles and the location of components. • Know about the functions of vehicles and components. 2. Performance (Know the basic operation of vehicles and components) • Know about the basic operation of vehicle systems and components such as: • Engine and mechanical components • Various types of fuel supply systems • Various types of engine management systems • Vehicle steering systems • Vehicle steering systems • Vehicle transmission systems • Vehicle transmission systems • Vehicle body and chassis components • Other related systems	Title	Know about the structure and basic operation of vehicles and components
servicing. Practitioners' should be able to know about the structure and basic operation of vehicles and components. Level 1 Credit 1 (For Reference Only) Performance Requirements 1. Knowledge (The structure and functions of vehicles and components) • Know about the formation of vehicles and the location of components. • Know about the functions of vehicles and components. 2. Performance (Know the basic operation of vehicles and components) • Know about the basic operation of various vehicle systems and components such as: • Engine and mechanical components • Various types of fuel supply systems • Various types of engine management systems • Vehicle steering systems • Vehicle braking systems • Vehicle transmission systems • Vehicle transmission systems • Various types of advanced electronic control systems • Various types of advanced electronic control systems • Vehicle body and chassis components • Other related systems Assessment Criteria The integrated outcome requirement of this unit of competency is that the practitioner being assessed shall prove that he/she is: • Capable of knowing about the formation, location, functions and basic operation of various vehicle systems and components.	Code	108633L1
Credit 1 (For Reference Only) Competency Performance Requirements 1. Knowledge (The structure and functions of vehicles and components) • Know about the formation of vehicles and the location of components. • Know about the functions of vehicles and components. 2. Performance (Know the basic operation of vehicles and components) • Know about the basic operation of various vehicle systems and components such as: • Engine and mechanical components • Various types of fuel supply systems • Various types of engine management systems • Various types of engine management systems • Vehicle steering systems • Vehicle suspension systems • Vehicle suspension systems • Vehicle transmission systems • Vehicle transmission systems • Various types of advanced electronic control systems • Various types of advanced electronic control systems • Vehicle body and chassis components • Other related systems Assessment Criteria The integrated outcome requirement of this unit of competency is that the practitioner being assessed shall prove that he/she is: • Capable of knowing about the formation, location, functions and basic operation of various vehicle systems and components.	Range	servicing. Practitioners should be able to know about the structure and basic operation of
Competency Performance Requirements 1. Knowledge (The structure and functions of vehicles and components) • Know about the formation of vehicles and the location of components. • Know about the functions of vehicles and components. 2. Performance (Know the basic operation of vehicles and components) • Know about the basic operation of various vehicle systems and components such as: • Engine and mechanical components • Various types of fuel supply systems • Various types of vehicle braking systems • Various types of vehicle braking systems • Vehicle suspension systems • Vehicle transmission systems • Vehicle transmission systems • Various types of advanced electronic control systems • Various types of advanced electronic control systems • Various types of advanced electronic control systems • Vehicle body and chassis components • Other related systems Assessment Criteria The integrated outcome requirement of this unit of competency is that the practitioner being assessed shall prove that he/she is: • Capable of knowing about the formation, location, functions and basic operation of various vehicle systems and components.	Level	1
1. Knowledge (The structure and functions of vehicles and components) • Know about the formation of vehicles and the location of components. • Know about the functions of vehicles and components. 2. Performance (Know the basic operation of vehicles and components) • Know about the basic operation of various vehicle systems and components such as: • Engine and mechanical components • Various types of fuel supply systems • Various types of vehicle braking systems • Various types of vehicle braking systems • Vehicle steering systems • Vehicle suspension systems • Vehicle transmission systems • Various types of advanced electronic control systems • Various types of advanced electronic control systems • Vehicle body and chassis components • Other related systems Assessment Criteria The integrated outcome requirement of this unit of competency is that the practitioner being assessed shall prove that he/she is: • Capable of knowing about the formation, location, functions and basic operation of various vehicle systems and components.	Credit	1 (For Reference Only)
Criteria assessed shall prove that he/she is: • Capable of knowing about the formation, location, functions and basic operation of various vehicle systems and components.	Competency	 1. Knowledge (The structure and functions of vehicles and components) Know about the formation of vehicles and the location of components. Know about the functions of vehicles and components. 2. Performance (Know the basic operation of vehicles and components) Know about the basic operation of various vehicle systems and components such as: Engine and mechanical components Various types of fuel supply systems Various types of engine management systems Various types of vehicle braking systems Vehicle steering systems Vehicle suspension systems Vehicle transmission systems General electrical systems Various types of advanced electronic control systems Vehicle body and chassis components
Remark	Assessment Criteria	assessed shall prove that he/she is:Capable of knowing about the formation, location, functions and basic operation of
	Remark
